

Replacement of 270 meter spiral belt

With a yearly production of about 3600 tons of fruit porridge in foil bags at Good Food Group in Taars, DK, we are dependent on a stable cooling process. We installed a spiral cooler in 2008, and we have continuously updated our belt during recent years. The need for replacement and maintenance of the existing belt, however, kept increasing and periodically effected the operations. We found the solution to our problem in close dialogue and cooperation with Ammeraal Beltech.

Major decision to change belt type

Ammeraal Beltech's spiral team reviewed all details of the application and the cooling process and recommended to change to the newest generation of spiral belts, the uni Flex ASB. This seemed obvious, and everything looked good on paper. Nevertheless, it was a major decision to change belt type, since this required changes to the spiral cooler itself.

Confidence in reliable technical support

The close dialogue and professional review of the project were decisive factors, and we decided to go ahead! The reliable technical support from Ammeraal Beltech gave us great confidence in our decision to replace 270 meters of spiral belt. They keep their promises, and this has been the case during the whole process. The spiral cooler has now been running with the uni Flex ASB belt for 9 months, and it is actually working better than ever. I can only say that the new solution is great.
